

Metal Roofs by Goldin Metals

Goldin Metals has weathered hurricanes for more than 65 years, along the Gulf Coast, and we understand the importance of getting back in operation as quickly as possible. With three locations along the coast of Louisiana, Mississippi and Alabama, we are able to respond immediately after the winds have subsided. Our manufacturing facility was unharmed by the recent storms and with a substantial inventory, we are in a position to immediately supply you with all your metal roofing and metal component needs, at **very low prices**. We would appreciate the opportunity to earn your business and become a preferred supplier to your company. We have enclosed a brief summary of some of the metal roofing and components that are offered by Goldin Metals, Inc. Please give us a call today, our experienced sales staff will assist you in placing your order. You can contact us at our Harvey facility at 504-361-3622 or 877-361-3622.

GoldinPanel

The GoldinPanel features a 5/8 inch high rib on nine inch centers with intermediate stiffening ribs. Used for both roofs and walls, the GoldinPanel is one of the most versatile and sturdy panels on the market due to its strength and design. The GoldinPanel is typically used for residential applications because of its cleaner, sleeker look and low profile. However, it is used in Commercial, Agricultural, and Industrial applications.

The GoldinPanel does not require caulking tape if installed properly due to its drain feature. This drain feature is a proprietary feature that allows water to drain down the panel and not collect. The GoldinPanel is available in a number of different gauges, lengths, and colors.

R-Panel

The R-Panel features a 1 ¼ inch high rib on twelve inch centers with intermediate stiffening ribs. Used for both roofs and walls, the R-Panel is one of the most common panels on the market due to its strength and design. The R-panel is typically used in Commercial, Agricultural, and Industrial applications. However, it is also commonly used for residential applications.

The R-Panel with a purlin bearing leg is a structural panel (which means it does not require solid decking). This panel can span purlins up to 5'. The R-Panel is available in a number of different gauges, lengths, and colors.

Mobile, AL 251-452-6384

Lafayette, LA (337) 314-0069

5V Crimp

The 5V Crimp offers a similar low profile as a standing seam roof at a more economical price. However, unlike the standing seam, screws will be exposed. The 5-V Crimp has been used on residential applications for many years and many times it is considered to add an “historic” look to a residence. Also, its low profile allows it to be used in Commercial, Agricultural, and Industrial applications. This makes the 5V Crimp a very versatile panel.

The 5V Crimp is available in a number of different gauges, lengths, and colors.

Goldin Choice Standing Seam

A standing-seam metal roof consists of metal panels running vertically on the roof deck. Each panel has two seams that stand up vertically and are fastened together to seal the joint and keep the elements from penetrating. This design prevents screws from being exposed to the elements which is beneficial for a lower pitched roof, if installed properly.

Goldin Metals, Inc produces Standing Seam panels in 22, 24 and 26 gauge in widths from 12 to 26 inches. Goldin Choice panels are available in fastening strip, snap seam, and mechanical lock. Goldin Choice also features rib heights of 1”, 1 ½”, and 1 ¾”.

Stone Coated Steel Roofing Systems

Stone Coated Steel Roofing Systems are available in Tile, Villa Tile, Shake, Shingle, and Shingle Plus (Architectural Shingle). Stone Coated Steel Roofing Systems can offer a classic look that features a traditional distinctive style, reinforced with the strength and longevity of steel. Available in a variety of colors, these colors incorporate a subtle natural shadow, which enhances the richness and detail of the roof.

Stone Coated Steel Roofing Systems is pressure formed aluminum-zinc alloy coated steel with an acrylic bonded stone chip finish. The stone coating resists fading and UV penetration. For more information, contact one of our Goldin Metals locations.

Rebar and Foundational Steel

Goldin Metals, Inc has a large selection of foundation steel in stock including rebar in #3, #4, #5, #6, #7, #8, and wire mesh at **very low prices**.
